

## Zebra Blinds

The possibility of combining the advantages of Roller Blinds with those of Vertical Blinds led to the creation of **Zebra Blinds**.

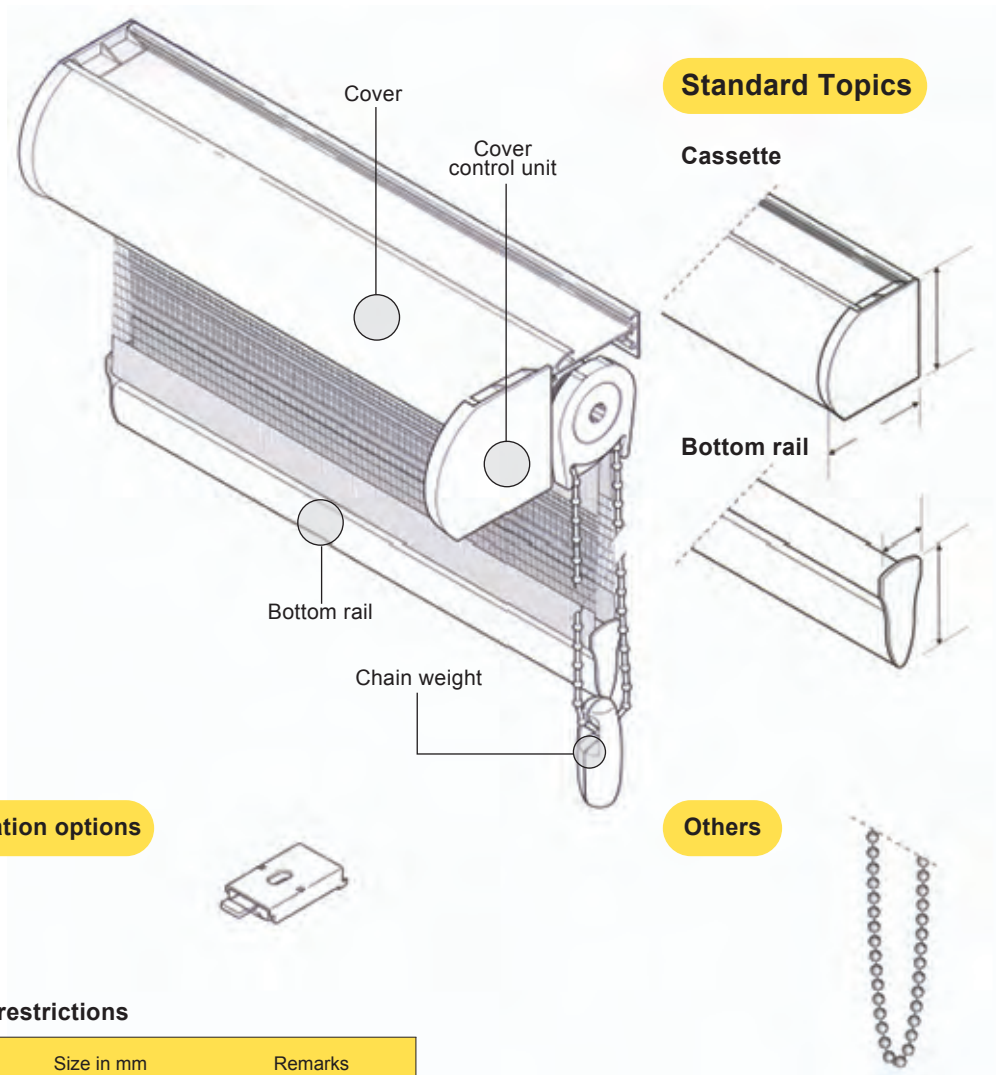

This system contains **transparent strips of textile** which interchange with strips which do not allow any visual contact neither from inside nor from outside.

Hence, it is a practical shading system incorporating the features of both Roller Blinds and Venetian Blinds, since such a single product provides the possibility of no visual contact from inside, partial visual contact or absolute visual contact and at the same time it protect seach area against the sun.

Zebra blinds fabrics are available in a wide range of colors & patterns (transparent or blackout, plain or wood look, etc).

Available colours: white, beige, silver

#### Size restrictions

Size Ind.	Size in mm		Remarks
	min	max
