

# PARKING SHADE

## What would be good to know about the parking shade:

- It is available in a length of up to 12 meters and an extension of 5 meters to cover an area of up to 60m<sup>2</sup>.
- The supporting structure is made of galvanized metal and is available painted in five colors: white, beige, silver, black, and brown (40x40, 80x40, and 100x100).
- The maximum height from the ground, of the end of the underpass or balustrade ranges from 3 - 3.5m while the low end usually starts at 1.8m.
- The fabric for the canopy is made of FR PVC film 800g/m very thick for full (100%) protection from the sun and rain.
- The posts are placed on one side and the length of the system determines their quantity in two, three, or four posts respectively, approximately each 4 meters.  
Two posts from 4 m to 5.25 m, three posts from 5.50 m to 9 m, and four posts from 9.25 to 12 m
- The curved elegant design of the shade with the unique hand-made look, and the lower end always towards the side of the sun, ensures, along with its elegant presence, the direct drainage of rainwater.
- **The metal parts for its construction are available in the following colors:**  
White – ral9010, Black matt, Brown – ral8014, Beige – ral1013 και Silver.
- **The PVC fabric is available in the following colors:**  
White, Beige και Grey.
- The method of fixing **the base** of the system depends on its size:  
For light small structure up to 5.25x3m, with flanges (30x30, 40x40) on the floor and on the wall if it is made of concrete.  
For heavy large structures, on a concrete foundation (80x100).
