

# PERGOLA – SKYLINE

## What is a Skyline Pergola?

The **Skyline** pergola, or Aluminum Tent Pergola, is a modern outdoor shading system specially designed for all climatic conditions with excellent application possibilities and very durable materials. It is used in homes and apartments because it can easily be adapted to patios, terraces, and balconies as well as in professional spaces such as cafes and restaurants, combining the ultimate protection from all kinds of weather conditions with the elegance and ease of its application in any space.

## What should we know about the Skyline pergola?

There are many reasons why an aluminum Skyline pergola should be the best shading option for a private or commercial outdoor space. First, it helps to expand the built space since it can be used even if it is external, in all seasons of the year. In fact, if the Skyline pergola is combined with the integration of vertical perimeter awning elements made of gelatin for lateral protection, then we can have a 100% protected space from rain, cold, and wind. Its load-bearing structure consists entirely of extruded, electrostatically painted aluminum.

Its movable roof consists of aluminum beams and a specially designed synthetic membrane.

The high-tech PVC Blackout, fire retardant (FR), waterproof and with a special anti-microbial composition membrane, is able to ensure a high degree of protection from solar radiation, heat, as well as from rain because the design of the pergola and its materials, allowing the rainwater to flow, without pooling on it.

It is available in various colors both in aluminum and in the movable roof.

LED lighting can be integrated to make full use of it even at night.

It provides the ability to cover large surfaces up to 130m<sup>2</sup> in an autonomous shading system.

It has a longer lifespan than other typical outdoor shading systems such as awnings and umbrellas.

Its durable and timeless materials, the flexibility and simplicity of its design combined with the effective shading it offers, make it one of the most popular pergola solutions and establish it in general as a completely reliable external shading system.

## Advantages of Skyline pergola

1. Aluminum structure with electrostatic painting in modern colors
2. Automatic sliding roof with fireproof 100% blackout membrane
3. The membrane is available in a wide range of colors
4. Remote control operation
5. Possibility of covering large surfaces up to 130m<sup>2</sup> in an autonomous system
6. Large extension up to 10m
7. Integrated aluminum rain gutter for rainwater drainage
8. Possibility of integration of vertical perimeter awning elements made of gelatin for lateral protection
9. Dimmable lighting
10. High resistance to harsh weather conditions

## PERGOLA - SKYLINE - ON/OFF LED LIGHTING

There are several ways to create a more relaxed and pleasant evening atmosphere. One of them is the lighting that can make your outdoor space look more warm and inviting and make you spend wonderful summer evenings.

Cold or warm color lighting can be added to the SKYLINE pergola. Lighting is an excellent additional element that should not be missing from any pergola.

The on/off LED lighting only offers the option to turn the lighting on and off. In case you would like to be able to adjust its intensity, use dimmable led lighting (it has a higher value).

In the price list below the value for each dimension, the total number of spotlights is indicated.

e.g.	550cm	600cm	650cm	700cm	750cm	800cm	850cm	900cm	950cm	1000cm
	18	18	21	21	24	24	27	27	30	30

Each spotlight has an output of 132 lumens (lm)

Each spotlight has an output of 132 lumens (lm)

## PERGOLA - SKYLINE - DIMMABLE LED LIGHTING

There are several ways to create a more relaxed and pleasant evening atmosphere. One of them is the lighting that can make your outdoor space look more warm and inviting and make you spend wonderful summer evenings.

Cold or warm color lighting can be added to the SKYLINE pergola. Lighting is an excellent additional element that should not be missing from any pergola.

The dimmable LED lighting also offers the possibility of adjusting its intensity.
